PROFESSIONAL SUMMARY

Software developer with hands-on experience building and debugging web applications, REST APIs, database-backed systems, and developer tools. Experienced in investigating AI-generated code, tracing backend and frontend failures, and correcting implementation issues affecting database connectivity, layout behavior, and maintainability. Works primarily with JavaScript/TypeScript, Node.js, React, PostgreSQL, and Supabase, with project experience in Python-based tooling. Focused on understanding why code fails, validating fixes, and producing maintainable software.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python (project experience), HTML, CSS, SQL

Backend & APIs: Node.js, Express.js, REST APIs, request validation, authentication flows

Databases: PostgreSQL, Supabase, database schema design, Row Level Security (RLS)

Code Quality: Debugging, AI-generated code review, defect investigation, edge-case awareness, refactoring, maintainability.

Tools & Platforms: Git, GitHub, Vercel, Render, Docker (project/learning experience)

CODE REVIEW & DEBUGGING HIGHLIGHTS

- **MOUAEC:** Investigated an HTTP 500 error tied to an AI-generated database connection implementation and corrected the connection approach.
- **Telica Digital Concept**: Traced clipped content and horizontal overflow to an AI-generated CSS change affecting section height and overflow behavior.

SELECTED PROJECTS

MOUAEC — University Voting System

https://mouaec.vercel.app

- Built a university voting application using HTML, CSS, JavaScript, and Supabase, with vote counts refreshed every 30 seconds.
- Investigated an HTTP 500 error associated with an AI-generated database connection approach; identified a mismatch between the Supabase client approach and the session-pooled connection required by the implementation, then corrected the connection setup.
- Implemented administrative vote-count correction and email-based administrator allowlisting, with access enforcement across the application and Supabase Row Level Security.
- Supported a voting exercise that accumulated approximately 3,000 votes.

Telica Digital Concept — Cohort Registration Website

https://telica-new.vercel.app

- Built a registration website using HTML, CSS, JavaScript, and Web3Forms, with form submissions triggering email notifications.
- Debugged an AI-generated CSS change that reduced a section's height and introduced overflow clipping, cutting off content and contributing to unwanted horizontal scrolling; corrected the layout behavior.

Cleaner — Local-First Code-Cleaning CLI

https://github.com/VeloraTech/Cleaner

- Developed a CLI tool for cleaning JavaScript and Python code, with a separate output directory by default to help preserve source files.
- Worked on transformation behavior and source-safety constraints, including the need to avoid removing imports or declarations that are still referenced.

AgentTrace — AI Coding-Agent Observability https://github.com/VeloraTech/AgentTrace

- Developed a command-line tool for observing running AI coding-agent processes and presenting process and activity information in a unified workflow.
- Worked on process discovery, snapshots/watch workflows, and event/timeline-oriented visibility to help developers inspect agent activity.

Aster — Technology Discovery & Comparison Platform https://aster-nine-liard.vercel.app

- Built a full-stack application using React, TypeScript, Vite, Express, PostgreSQL, and Supabase.
- Implemented technology exploration, individual technology profiles, comparisons, and ecosystem information, working across frontend behavior, API integration, and data persistence.

EXPERIENCE

Lead Developer | Axial Systems | Jan 2026 – Present https://axial-systems.vercel.app

- Built a landing page with HTML, CSS, JavaScript, GSAP, and ScrollTrigger.
- Implemented animation and scroll-driven interactions while working across frontend structure, styling, and behavior.

Founder & Technical Mentor | LogicLabs Academy | Aug 2025 – May 2026

- Taught and mentored more than 200 students in a technical learning community.
- Organized interns around Campus-Link, an educational web-app concept; the project was not completed and is not presented as a shipped product.

EDUCATION

B.Eng. Michael Okpara University of Agriculture, Umudike (MOUAU) Expected September, 2029
